In the claims.

2. Claim 6 is to be cancelled.

Claim 12 is to read: An inference module stored on a computer readable medium, that when executed on a processor, causes the processor to perform a method, the method comprising:

evaluating problems in a main computer system that executes an application, wherein:

the inference module processes problem related data with knowledge representations to identify solution identification rules, said knowledge representations being stored with sets of solution identification rules semantically grouped, and

the inference module characterized in that the inference module is part of a service system receiving problem related data from the main computer system over a network, said problem related data representing a problem identified about data in the main system; and

returning the solution identification rules to the main system, where in the service system returns solution identification rules that solve the problem directly,

further wherein during the processing of problems related data, the inference module identifies the solution identification rules by applying knowledge representations in at least one of a sequential order, a hierarchical order, and a dynamically adaptive order, and

further wherein the solution identification rules comprise computer instructions to automatically solve the problem.

3. Authorization for this Examiner's amendment was given in a telephone interview with Mr. Patel on 2/11/2007.

5. The following is an Examiner's Statement for reasons for allowance:

Claims 1-5, 6-17 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claims, including the claimed invention of a main computer system comprising a database, an application server and a front-end server, wherein the main system executes an application in cooperation with a human user and a remote service computer system for evaluating problems in the main system comprising: a service module (embedded with the main computer system), to collect problem related data from the main system said problem related data representing a problem identified about data in the main system an acquisition module (embedded with the main computer

system) to acquire knowledge representations a knowledge module (embedded with the main computer system), to store the knowledge representations generate solution identification rules comprising computer instructions to automatically solve the problem, group sets of the solution identification rules semantically, and store the knowledge representations with the sets of semantically grouped solution identification rules and an inference module (embedded with the main computer system) to process problem related data with knowledge representations to identify the solution identification rules, and forward the solution identification rules through the service module to the main computer system wherein the inference module identifies the solution identification rules by applying knowledge representations to the problem related data in at least one of a sequential order, a hierarchical order, and a dynamically adaptive order and, wherein the identified solution identification rules are applied to solve the problem identified in the main system, as specified in claim 1, 7 and 12.

6. The closest prior art teaches (U. S. Patent 6237144, referred to as **Wookey**) a main computer system comprising a database, an application server and a front-end server, wherein the main system executes an application in cooperation with a human user. (**Wookey**, Fig. 1A and 1B, C3:39 through C4:4; 'Main computer system' of applicant is equivalent to 'monitored computer system' of Wookey. 'Database' of applicant is inherent by all the databases within all the computers being monitored within the main computer system (item 102). 'Application server' of applicant is disclosed by 'tests' of Wookey. 'Front end server' of applicant is equivalent to

'communication' of Wookey.), and a remote service computer system for evaluating problems in the main system (**Wookey**, Fig. 1A and 1B, C3:39 through C4:4; 'Remote service computer system' of applicant is equivalent to 'exemplary computer system' (item 100) of Wookey.) comprising: a service module, to collect problem related data from the main system said problem related data representing a problem identified about data in the main system (**Wookey**, Fig. 13, C17:61 through C18:29; 'Service module' which collects 'problem related data' of applicant is equivalent to 'run alerts against incoming host state' (item 1301) of Wookey.) an acquisition module to acquire knowledge representations (**Wookey**, Fig. 13, C17:61 through C18:29; 'Acquisition module' of applicant is disclosed by the search for 'keywords' of known problems of Wookey.)

7. The references either by themselves or in combination fail to teach a knowledge module, to store the knowledge representations generate solution identification rules comprising computer instructions to automatically solve the problem, group sets of the solution identification rules semantically, and store the knowledge representations with the sets of semantically grouped solution identification rules, and an inference module to process problem related data with knowledge representations to identify the solution identification rules, and forward, the solution identification rules through the service module to the main computer system, wherein the inference module identifies the solution identification rules by applying knowledge representations to the problem related data in at least one of a sequential order, a hierarchical order, and a dynamically

adaptive order and, wherein the identified solution identification rules are applied to solve the problem identified in the main system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
